HK-D3;

Novel isolated anti-angiogenic polypeptide comprising sequence of human kininogen domain 3v (HK-D3v) or variant of native HK-D3, useful for inhibiting angiogenesis, endothelial cell proliferation or endothelial tube formation.

N-PSDB; ADM16606.

Disclosure; SEQ ID NO 2; 79pp; English.

The invention relates to an isolated anti-angiogenic polypeptide (I) comprising the sequence of human kininogen domain 3v (HK-D3v) (fully defined sequence (S1) of 127 amino acids as given in specification) or variant or derivative of native HK-D3 (fully defined sequence (S2) of 123 amino acids as given in specification), and has at least 20% of activity of native HK-D3 in inhibiting angiogenesis, endothelial cell inhibiting angiogenesis, endothelial cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC diagnostically or therapeutically labelled anti-angiogenic polypeptide (II) comprising (I) labelled with a diagnostic or therapeutic label, and CC (II) comprising (I) labelled with a diagnostic or therapeutic label, and CC with a detectable label and a carrier. Further disclosed is an affinity CC ligand (IX) useful for binding to or isolating an HK-D3-binding molecule CC or cells expressing the binding molecule, comprising (II) immobilized to a correct or carrier. (I) or (II) are useful for inhibiting cell conducing apoptosis which involves contacting cells associated with CC inducing apoptosis which involves contacting cells associated with CC undesired cell migration, invasion, proliferation or angiogenesis with CC (I) is useful for treating neurodegenerative diseases e.g., (I) is useful for treating neurodegenerative diseases e.g., (IX) is useful for treating neurodegenerative diseases e.g., (LS). The current sequence represents an N-terminal addition variant of terminal of the N-terminal addition variant of terminal collegenerative contacting an additional GS at the N-terminal collegenerative contacting collegenerative contacting cells as sociated with collegenerative contacting cells as collegenerative contacting cells as collegenerative diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 2

proliferation or angiogenesis

```
cc variant or derivative, a variant or derivative of native HK-D3 having a cfully defined 123 amino acid sequence given in the specification, which completely compared to the activity of polypeptide, variant or derivative has at least 20% of the activity of native HK-D3 in inhibiting angiogenesis, endothelial cell proliferation compared to a magiogenesis, endothelial cell proliferation compared to a magiogenesis, or for inducing apoptosis, which involves contacting comparising (I) is useful for therapeutically labeled (I). A composition comparising (I) is useful for treating subject having a disease or comparising associated with undesired cell migration, invasion, proliferation comparising associated with undesired cell migration, invasion, composition composition composition composition associated with undesired cell migration, invasion, composition compos

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ADM16602 standard; protein; 123 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (HK). The invention provides peptides (see AAYS9405-24) that are analogues of certain sites in the HK domain 3, specifically Asm275-Ly8282, Cy8246-Cy8249, Leu331-Tyr318 and Tyr299-Ser314. The peptides, which native Cys residues may be replaced by Ala residues, inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting angiogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rheumatoid arthritis, and ocular disorders characterized by undesired vascularization of the retina are treated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 123

CC variant or derivative of native HK-D3 (fully defined sequence (82) of 123 cc amino acids as given in specification), and has at least 20% of activity cc of native HK-D3 in inhibiting angiogenesis, endothelial cell ccl proliferation or endothelial tube formation. Also disclosed is a cc diagnostically or therapeutically labelled anti-angiogenic polypeptide (II) comprising (I) labelled with a diagnostic or therapeutic label, and a diagnostic HK-D3-related composition (III) comprising (II) labelled with a diagnostic or therapeutic label, and detectable label and a carrier. Further disclosed is an affinity cl jand (IX) useful for binding to or isolating an HK-D3-binding molecule cor cells expressing the binding molecule, comprising (I) immobilized to a solid support or carrier. (I) or (II) are useful for inhibiting cell ingration, cell invasion, proliferation or angiogenesis, or for undesired cell invasion, invasion, proliferation or angiogenesis with (I) (I) is useful for treating neurodegenerative diseases e.g., Alzheimer's disease, Parkinson's disease or amyotrophic lateral sclerosis cequence.
Sequence 123 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated anti-angiogenic comprising the sequence of human kininogen domain 3v defined sequence (S1) of 127 amino acids as given in variant or derivative of native HK-D3 (fully defined
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tube formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  inhibiting angiogenesis, endothelial cell proliferation or endothelial

The invention relates to an isolated anti-antiangiogenic polypeptide (I) the sequence of human kininogen domain 3 variant (HK-D3v) having a cc fully defined 127 amino acid sequence given in the specification, or its call and the specification of the comparing a cc variant or derivative, a variant or derivative of native HK-D3 having a cc fully defined 123 amino acid sequence given in the specification, which cc polypeptide, variant or derivative has at least 20% of the activity of cc native HK-D3 in inhibiting angiogenesis, endothelial cell proliferation cc or endothelial tube formation in an in vitro or in vivo bioassay. (I) is correspond for inhibiting cell migration, cell invasion, cell proliferation cc angiogenesis, or for inducing apoptosis, which involves contacting cc angiogenesis with (I) or a therapeutically labeled (I). A composition cc cangiogenesis with (I) or a therapeutically labeled (I). A composition condition associated with undesired cell migration, invasion, proliferation cc condition associated with undesired cell migration, invasion, contacting condition associated with undesired cell migration, invasion, contacting condition associated with undesired cell migration, invasion, contacting cc condition associated with undesired cell migration, invasion, invasion, cc condition associated with undesired cell migration, invasion, invasion, cc condition associated with undesired cell migration, invasion, invasion, cc condition associated with undesired cell migration, invasion, invasion, cc condition associated with undesired cell migration. Accomposition cc condition associated with undesired cell migration, invasion, providing to a cc condition associated with undesired cell migration. Accomposition cc condition associated with undesired cell migration, invasion, contacting cc condition associated with undesired cell migration. This sequence cc condition associated with undesired cell migration and contacting condition and contacting condition and contacting condition and condition and conditio

Claim 1; SEQ ID NO 40; 268pp; English.

maintenance molecule (PMMM) (I), designated pmMM-40. Also described: (1) cmaintenance molecule (PMMM) (I), designated pmodification and comprising a promoter sequence operably linked to the polynucleotide in a isolated polynucleotide in comprising a plutransformed with the recombinant polynucleotide in comprising a plutransformed with the recombinant polynucleotide (1); (2) a cellar polynucleotide in comprising a plutransformed with the recombinant polynucleotide (2); (3) a cellar polynucleotide in comprising the precombinant polynucleotide or (1); (3) a cellar polynucleotide or (1); (3) a cellar polynucleotide or (1); (3) a cellar polynucleotide or (1); (4) a composition or an attained proposition or compound, an antagonist compound or an antibody, and an exciptent; (5) or treating diseases or conditions associated with decreased expression or treating diseases or condition or an antibody, and an exciptent; (5) that is effective as an agonist or antigonist of (1), or is effective in that is effective as an agonist or antigonist of (1), or is effective in that is effective as an agonist or antigonist of (1), or is effective in condition or disease associated with the expression of the target polynucleotide; (11) perpenting a polyclonal or or disease associated with the expression or monoclonal antibody with a subject; (14) preparing a polyclonal or monoclonal antibody with the tribody produced by the method in (14); (15) a composition are monoclonal antibody and a subject; (14) preparing a polyclonal polyclonal or monoclonal antibody with the subject of a sample containing the compositions or polyclonal antibody. And a subject is a composition profile of a sample containing the compositions are polyclonal antibody. And a subject is a contained to a contained the effect of the polymelotide molecule composition and methods are useful for compositions and can be effective. The composition a protein-protein interactions,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
The invention relates to novel diagnostic and therapeutic polynucleotides

Selected from one of the 2722 sequences defined in the specification. A

polynucleotide of the invention may have a use in gene therapy. The human

diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be

used to diagnose a particular condition, disease or disorder associated

with human molecules, e.g. cell proliferative disorders, or

disorder, neurological disorders, gastrointestinal disorders, or

disorder, neurological disorders, gastrointestinal disorders, or

infections caused by virus, bacteria, fungi or parasite. The dithp

molecules may also be used in genetic mapping, in identifying individuals

from minute biological samples, in detecting single nucleotide

polymorphisms, as molecular weight markers, and for somatic or germline

gene therapy. The present sequence represents a dithp protein of the

cuther therapy. The sequence data for this patent is not represented in

the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 र्

```

The present invention relates to novel human extracellular messenger proteins (EXMES-1 to-28; ABP70774-ABP70801) and their coding sequence (ACC42361-ACC42388). The proteins are useful for preparing a composit for diagnosing or treating a disease or condition associated with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens
The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dith) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel human extracellular messenger proteins (EXMES-1 to-28; ABB700774-ABB70801) and their coding sequences (ACC42361-ACC42388). The proteins are useful for preparing a compositic for diagnosing or treating a disease or condition associated with decreased expression or overexpression of functional EXMES e.g. autoimmune/inflammatory disorders, diabetes, endocrine disorders or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     expression or overexpression of functional EXMES e.g. autoimmune disorders or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                  neuroprotective; antiinflammatory;

A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be

The present invention relates to the isolation of human protein CC modification and maintenance molecules (PMMM), and the polynucleotide CC sequences encoding them. A total of 40 pMMM polypeptides (designated pMMM CC = 1 to pMMM-40) are disclosed. The sequences of the invention are useful CC for diagnosing a condition or disease associated with the expression of CC pMMM in a subject, preparing a polyclonal or monoclonal antibody, and CC generating an expression profile of a sample containing the CC expression or overexpression of pMMM are cell proliferation disorders (e.g. epilepsy, CC (e.g. cancer, atherosclerosis), neurological disorders (e.g. epilepsy, CC (e.g. cancer, atherosclerosis), neurological disorders, (e.g. epilepsy, CC allergies), developmental disorders (e.g. hypothyroidism, Cushing's CC allergies), developmental disorders (e.g. hypothyroidism, Cushing's pMMM polypeptides or their fragments are useful in screening compounds (e.g. epilepsy), correspondents are useful in screening compounds that the activity of the polypeptides, or in CC altering the expression of the target polynucleotide and compounds that general polynucleotide and compounds that perform the polypeptides or that the activity of the polypeptide.

ABU92021-ABU92060 represent the human pMMM polypeptides of the invention

Human extracellular messenger, EXMES-27

RESULT 14

standard; protein;

```
The invention relates to novel diagnostic and therapeutic polynucleotides composited from one of the 2722 sequences defined in the specification. A complex condition of the invention may have a use in gene therapy. The human composition and therapeutic polynucleotides (dithp) or polyneptides may be used to diagnose a particular condition, disease or disorder associated composition with human molecules, e.g. cell proliferative disorder, endocrine autoimmune/inflammatory disorder, developmental disorder, or composition disorder, or composition caused by virus, bacteria, fungion parasite. The dithp composition caused by virus, bacteria, fungion parasite. The dithp composition in the bological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline composition. Note: The sequence represents a dithp protesin of the composition. Note: The sequence represents a dithp protesin of the composition of the printed specification, but was obtained in electronic format directly from wife at www.wipo.int/pct/en/sequences/listing.htm

The invention relates to a detection reagent capable of detecting one or composed mucleic acid polymorphisms. The invention also relates to compose determining whether a trait is linked to one of the human chromosomes or compately readable medium having stored in it the SNP concession, a computer readable medium having stored in it the SNP concession at least about 12 contiguous mucleotides, genotyping at least concession in a sample, identifying an comprising at least about 12 contiguous mucleotides, genotyping at least concession in a sample, identifying an comprising at least one container containing the detection reagent. CC the sub-region comprises determining whether a trait is linked to one of the human chromosomes or its sub-region comprises determining whether that differentiates between alternative composition given in the specification in a sample comprises contacting the detection reagents. Genotyping at least one SNP position given in the specification given in the specification. CC alleles at at least one SNP position given in the specification. CC alleles at at least one SNP position given in the specification in a concess of determining which allele is present at the at least one SNP position. CC comprises genotyping at least one SNP specification in a nucleic acid sample from the individual. The disorder is type II diabetes. CC comprises genotyping at least one SNP specification in a cc concession and diabetes or obesity. This sequence concession in a sequence data for this patent did not form part of the printed cc sequence data for this patent did not form part of the printed cc sequence data for this patent did not form part of the printed cc sequence attained in the scope of the invention. Note: The sequence attained in the scope of the invention. Supposed the sequence in the scope of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New detection reagent capable of detecting 1, 100, 500, 1000 or 5000 or more single nucleic acid polymorphisms, useful in identifying an individual having or at risk of developing type II diabetes or obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; SEQ ID NO 102; 31pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1, Application Patent No. 6110686
                                    Sequence 17, Application US/09461061
Patent No. 6689931
GENERAL INFORMATION:
APPLICANT: McCrae, Keith R.
APPLICANT: McCrae, Keith R.
AITLE OF INVENTION: Inhibition of Angiogenesis By High Molecular Weight
TITLE OF INVENTION: Kininogen Domain 3 Peptide Analogs
FILE REFERENCE: 6056-260 US
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GENERAL INFORMATION:
CURRENT APPLICATION NUMBER: US/09/461,061
